Summary

Software Engineer with expertise in building scalable full-stack applications using the MERN stack. Proven track record in developing secure, and machine learning fundamentals. Experienced in developing a MediCore HMS Platform and an ML-powered chatbot, demonstrated by developing an AI interview platform featuring automated evaluations and responsive user interfaces.

Skills

Programming Languages: Python, C, C++, JavaScript, SDLC
Frontend: HTML, CSS, React.js, Tailwind CSS
Backend and databases: Database management · SQL, MongoDB, Flask,Node.jsBackend services
Software Engineering:: Application Testing, Debugging, API Testing, Troubleshooting, Input Validation
Developer Tools: Git, GitHub, Chrome DevTools, VS Code, Vite, npm, Postman
Core Concepts: Data Structures and Algorithms, OOP, DBMS, SDLC, REST APIs

Experience

Python Intern - ML **April 2026 – June 2026** *Interns Elite Online Training and Internship*

- Reviewed, categorized, labeled, and validated AI training data while maintaining project-defined quality standards.
- Applied structured validation and quality-control processes with strong attention to accuracy and consistency.
- Worked within a professional team environment, following project guidelines and meeting assigned deliverables.

Projects

MedControl — Hospital Management Dashboard — React.js, Node.js MongoDB, REST APIs 2026

- Developing a hospital administration system with modules for patients, appointments, doctors, consultation, pharmacy, laboratory, admissions, billing, and reports.
- Built a React-based dashboard with reusable UI components and role-based navigation and structured reusable React components for the frontend.
- Tested dashboard navigation, UI interactions, and form behavior during development, Integrated a MongoDB-backed application architecture and planned API-driven data management.

AceChat — Academic ML Chatbot — Python, NLTK/Transformer Concepts 2026

- Developed a machine learning-based chatbot using Python, Flask, NLTK, and Natural Language Processing.
- Implemented text preprocessing and TF-IDF vectorization with Logistic Regression for intent classification.
- Integrated the Flask backend with a React frontend to deliver chatbot responses through API communication
- Tested React-to-Flask API communication and chatbot response handling.Debugged backend integration and dependency issues during development.

Certifications

Python	*InternsElite*	**2026**
Cyber Security - Hackathon	*SIMATS Engineering*	**2026**
Cloud Computing	*NPTEL*	**2026**

Education

B.Tech CSE — 2027 *Audisankara College of Engineering and Technology* *CGPA: 7.5 / 10*
